

Computational Physics / PHYS-UA 210

This course teaches computational physics at a level appropriate for undergraduate physics majors. Classes meet Tuesday and Thursday 12:30am to 1:45pm, in Room 1067 of 726 Broadway. The textbook is *Computational Physics*, by Mark Newman. I will also ask you sometimes to look online at the Python Data Science Handbook (PDSH) by Jake Van Der Plas.

If you have never programmed in Python before then Chapter 2 of the book will require your special attention. There are also many online resources for learning the basics of Python. I can recommend Software Carpentry.

Prof. Blanton's office is Room 941 of 726 Broadway, and his email is blanton@nyu.edu. Office hours are Tuesdays 11:00am to 12:15pm.

The teaching assistant is Aditya Hardikar (avh292@nyu.edu) Recitation is Thursday, 5pm–6:15pm, also in Room 1067 of 726 Broadway. This time will primarily consist in working on homework assignments.

The class will be participatory. Please read the assignments *before* attending class; you will be expected at certain points to follow along with calculations on your computer.

There will be no exams in this course, but there will be a pretty heavy load of assignments:

- You will complete roughly weekly homeworks. You may consult with each other about the homeworks, but you must write your own individual code and report. This report will be in the form of rendered Jupyter notebooks and/or L^AT_EX documents, submitted to the TA in a manner they prescribe.
- The second major assignment is a large project performed in groups of two or three students each, culminating in a presentation in December. You will hand in a report written using L^AT_EX, a standard format for physics research that you might as well become familiar with (the homeworks will introduce this format). Two intermediate drafts are due of this large project, which I will comment on. The projects are designed so that you can complete parts of them during the course of the semester based on material already covered.

Grades are based on problem sets (65%), the large project and presentation (25%), and class participation (10%).

The classes will proceed as follows (subject to revision!). The problem sets will be due on each Friday of the indicated weeks.

<i>Date</i>	<i>Topic</i>	<i>Reading</i>	<i>Problem Sets</i>
2019-09-03 (T)	Numbers on computers	Ch. 1, 2, 3	PS#1
2019-09-05 (R)	Arrays	PDSH, Ch. 1 & 2	
2019-09-10 (T)	Numerics	Ch. 4	
2019-09-12 (R)	Random Numbers	Ch. 10.1	PS#2
2019-09-17 (T)	Random Numbers	Ch. 10.2	Teams Determined
2019-09-19 (R)	Integration	Ch. 5.1–5.3	PS#3
2019-09-24 (T)	Integration	Ch. 5.4–5.6	—
2019-09-26 (R)	Integration	Ch. 5.7–5.9	PS#4
2019-10-01 (T)	Differentiation	Ch. 5.10–5.11	PS#5
2019-10-03 (R)	Linear Algebra	Ch. 6.1	
2019-10-08 (T)	Linear Algebra	Ch. 6.1	
2019-10-10 (R)	Eigensystems	Ch. 6.2	PS#6
2019-10-15 (T)	Legislative Day, no class	Ch. 6.2	PS#7
2019-10-17 (R)	Eigensystems	Ch. 6.2	
2019-10-22 (T)	Eigensystems	Ch. 6.2	
2019-10-24 (R)	Root-finding	Ch. 6.3	PS#8
2019-10-29 (T)	Fourier Analysis	Ch. 7.1–7.2	PS#9
2019-10-31 (R)	Functional Programming	—	
2019-11-05 (T)	Fourier Analysis	Ch. 7.3–7.4	
2019-11-07 (R)	Minimization	Ch. 6.4	Project draft due
2019-11-12 (T)	Minimization	Ch. 6.4	PS#10
2019-11-14 (R)	Ordinary DEs	Ch. 8.1–8.3	
2019-11-19 (T)	Ordinary DEs	Ch. 8.4–8.5	
2019-11-21 (R)	Ordinary DEs	Ch. 8.6	
2019-11-26 (T)	Partial DEs	Ch. 9.1–9.2	
2019-11-28 (R)	Thanksgiving, no class	Ch. 9.3	Final project due
2019-12-03 (T)	Partial DEs		
2019-12-05 (R)	Partial DEs		
2019-12-10 (T)	Project presentations	—	PS#11
2019-12-12 (R)	Project presentations	—
